

KNOW YOUR BLOOD TYPE

Your Reset Starts Here

A food, herb, skincare, and deficiency-support guide for each blood type.

Educational wellness guide only. Use this as a reset framework and personalize based on allergies, medications, pregnancy status, medical conditions, and how your body responds.

Why Knowing Your Blood Type Matters

In this reset framework, your blood type is used as a starting point for choosing foods, herbs, and body-care products that may feel more supportive for your digestion, energy, cravings, inflammation response, and weight-loss routine.

- Build meals that feel easier for your body to process.
- Choose herbs and teas that support digestion, detox pathways, minerals, and calm energy.
- Reduce foods and chemicals that may trigger bloating, skin irritation, mucus, cravings, or sluggish energy.
- Track your response so your plan becomes personal, not random.

How To Get Your Blood Type At Home

For instant at-home results, look for a finger-prick blood typing kit that includes anti-A, anti-B, and anti-D/Rh testing fields. One common option is the EldonCard blood type test kit.

- [EldonCard official website](#)
- [Amazon search for EldonCard blood type test](#)
- [Walgreens search for blood type test](#)
- [CVS search for blood type test](#)

Availability, pricing, and shipping can change. Confirm the current listing before ordering. For medical records, pregnancy, or transfusion needs, confirm with a licensed lab or healthcare provider.

Blood Type O

Focus: Protein, greens, minerals, movement, and steady metabolism support.

Benefits of Eating for This Type

- May feel more energized with protein-forward meals and mineral-rich greens.
- May support fuller meals and steadier appetite when protein and fiber are paired.
- May support muscle tone, recovery, and active routines.

Foods That Feed This Blood Type

- Lean beef, lamb, turkey, chicken, salmon, cod, sardines, eggs
- Kale, spinach, collard greens, broccoli, onions, garlic, seaweed
- Sweet potatoes, pumpkin, squash, olive oil, walnuts, pumpkin seeds
- Blueberries, cherries, plums, figs, prunes

Herbs and Teas

- Burdock root
- Dandelion root
- Nettle
- Ginger
- Parsley
- Peppermint
- Cayenne

Foods To Avoid or Reduce

- Too much wheat/gluten-heavy meals
- Excess corn and corn syrup
- Heavy dairy if it causes mucus, bloating, or skin flare-ups
- Too much processed sugar, fried food, and low-protein snacking

What May Happen When You Go Against This Type

Going against Type O support may show up as sluggish digestion, cravings, water retention, bloating, low energy after meals, or slower reset progress.

Common Deficiency Support Focus

B vitamins, iodine/sea minerals, vitamin D, magnesium, omega-3 fats, and digestive enzyme support.

Chemicals and Skincare Ingredients To Avoid or Reduce

Heavy synthetic fragrance, harsh sulfates, phthalates, parabens, triclosan, petroleum-heavy body products, and strong chemical cleaners without ventilation.

Blood Type A

Focus: Plant-forward meals, gentle digestion, calm energy, and lighter proteins.

Benefits of Eating for This Type

- May feel lighter with vegetables, fruits, beans, tofu, and fermented foods.
- May support smoother digestion when meals are less greasy and more plant-focused.
- May support calm energy and less heaviness after meals.

Foods That Feed This Blood Type

- Tofu, tempeh, lentils, black beans, pinto beans, eggs if tolerated
- Broccoli, kale, spinach, carrots, onions, garlic, mushrooms, avocado
- Oats, brown rice, quinoa, flaxseed, chia, walnuts, olive oil
- Pineapple, berries, cherries, grapefruit, apples, peaches

Herbs and Teas

- Green tea
- Chamomile
- Ginger
- Burdock root
- Milk thistle
- Hawthorn berry
- Lemon balm

Foods To Avoid or Reduce

- Too much red meat and processed meat
- Heavy fried foods and greasy meals
- Excess dairy if it causes congestion or skin issues
- Too much white flour, refined sugar, and caffeine overload

What May Happen When You Go Against This Type

Going against Type A support may show up as heaviness after meals, constipation, inflammation feelings, skin flare-ups, low mood, or stress-eating cravings.

Common Deficiency Support Focus

B12, iron, vitamin D, zinc, omega-3 fats, magnesium, and protein if meals are too light.

Chemicals and Skincare Ingredients To Avoid or Reduce

Artificial fragrance, drying alcohols, formaldehyde releasers, harsh exfoliating acids used too often, synthetic dyes, and strong perfumed laundry products.

Blood Type B

Focus: Balanced variety, dairy if tolerated, clean proteins, and flexible digestion.

Benefits of Eating for This Type

- May feel balanced with variety instead of extreme restriction.
- May support satiety when protein, produce, and healthy fats are included.
- May support digestion with fermented foods when tolerated.

Foods That Feed This Blood Type

- Lamb, turkey, eggs, salmon, cod, yogurt, kefir, cottage cheese if tolerated
- Kale, cabbage, carrots, beets, sweet potatoes, mushrooms, cucumbers
- Oats, rice, quinoa, olive oil, walnuts, flaxseed
- Grapes, pineapple, bananas, papaya, plums

Herbs and Teas

- Ginger
- Peppermint
- Licorice root
- Ginseng
- Parsley
- Sage
- Dandelion root

Foods To Avoid or Reduce

- Too much chicken if it feels inflammatory in your reset plan
- Excess corn, peanuts, and sesame if they trigger bloating
- Processed meats and fried foods
- Sugary coffee drinks and late-night sweets

What May Happen When You Go Against This Type

Going against Type B support may show up as bloating, mucus, fatigue, cravings, sluggish bowel movements, or weight feeling stuck.

Common Deficiency Support Focus

Magnesium, B vitamins, vitamin D, zinc, probiotics, and omega-3 fats.

Chemicals and Skincare Ingredients To Avoid or Reduce

Synthetic fragrance, parabens, SLS/SLES sulfates, heavy silicones on acne-prone skin, mineral oil-heavy products, and pesticide-heavy produce without washing.

Blood Type AB

Focus: Combination support: light proteins, plants, cultured foods, and gentle digestion.

Benefits of Eating for This Type

- May feel best with smaller balanced meals rather than heavy portions.
- May support digestion with vegetables, fermented foods, and lighter proteins.
- May support steady energy when sugar and greasy foods are reduced.

Foods That Feed This Blood Type

- Salmon, tuna, turkey, tofu, tempeh, yogurt, kefir if tolerated
- Kale, broccoli, cucumbers, spinach, onions, garlic, mushrooms
- Oats, rice, quinoa, olive oil, walnuts, pumpkin seeds
- Grapes, cherries, berries, pineapple, plums, figs

Herbs and Teas

- Green tea
- Chamomile
- Ginger
- Hawthorn berry
- Milk thistle
- Lemon balm
- Burdock root

Foods To Avoid or Reduce

- Too much red meat and processed meat
- Heavy fried foods
- Too much corn and refined sugar
- Large late-night meals that slow digestion

What May Happen When You Go Against This Type

Going against Type AB support may show up as fatigue, bloating, heaviness, cravings, skin congestion, or feeling inflamed after meals.

Common Deficiency Support Focus

B12, vitamin D, iron, zinc, magnesium, omega-3 fats, and probiotics.

Chemicals and Skincare Ingredients To Avoid or Reduce

Artificial fragrance, harsh preservatives, parabens, phthalates, drying alcohols, synthetic dyes, and strong household chemicals without ventilation.

Universal Chemical Avoid List

These are common chemical categories many people choose to reduce during a reset, especially if they deal with skin irritation, headaches, hormone concerns, inflammation feelings, or sensitivity.

- Artificial fragrance/parfum, especially in lotions, body wash, sprays, and laundry products.
- Phthalates, often hidden under fragrance in personal-care products.
- Parabens in lotions, cosmetics, and hair products.
- SLS/SLES sulfates in harsh cleansers, shampoos, and body washes.
- Triclosan in antibacterial products.
- Formaldehyde releasers such as DMDM hydantoin, quaternium-15, imidazolidinyl urea, and diazolidinyl urea.
- Toluene, DBP, and formaldehyde in nail products.
- Hydroquinone unless directed by a professional.
- Oxybenzone and octinoxate in some sunscreens if you are choosing mineral-based options.
- Bleach/ammonia mixing, strong oven cleaners, heavy degreasers, and unventilated chemical cleaners.

Reset Tracking Checklist

- Blood type and Rh factor confirmed: _____
- Foods that give me energy: _____
- Foods that cause bloating or cravings: _____
- Herbs/teas I tolerate well: _____
- Skin/body products I am removing: _____
- Top deficiency support focus: _____

Simple 7-Day Reset Rule

For 7 days, build each meal around your blood-type food list, drink one supportive tea daily, remove the avoid foods that trigger you the most, and swap heavily scented skincare or cleaning products for fragrance-free or cleaner options. Track digestion, energy, cravings, skin, mood, and water retention.
