WELCOME TO THE NEXT PHASE OF YOUR TRANSFORMATION

Most people begin their journey focused on one thing:

Weight loss.

The reality is that transformation is far more complex than simply losing pounds.

The body is constantly working to maintain balance. Every day your body is regulating hormones, repairing tissue, managing inflammation, producing energy, processing nutrients, regulating hunger signals, maintaining muscle, and recovering from physical and mental stress.

When one area begins to struggle, other areas are often affected as well.

This is why many individuals find themselves stuck.

They may be eating less.

They may be exercising more.

Yet they continue to experience:

- Low energy
- Cravings
- Fatigue
- Poor recovery
- Plateaus
- Weight regain
- Difficulty staying consistent

The goal of this guide is to help you understand how your body works together as a complete system and how proper nutrition, hydration, muscle preservation, inflammation management, herbs, and peptide support can all play a role in long-term success.

THE OI TRANSFORMATION FRAMEWORK™

Many people search for a magic solution.

The truth is that successful transformation happens when multiple pieces work together.

STEP 1: KNOW YOUR BLOOD TYPE

Understanding your body helps you make more informed decisions about nutrition and wellness.

STEP 2: IDENTIFY DEFICIENCIES

Many people discover that they are deficient in nutrients that support energy production, recovery, metabolism, and overall wellness.

STEP 3: CORRECT NUTRITIONAL GAPS

Your body cannot perform optimally without proper nutritional support.

STEP 4: IMPROVE HYDRATION

Hydration impacts nearly every process in the body.

STEP 5: INCREASE PROTEIN INTAKE

Protein supports muscle preservation, recovery, and body composition.

STEP 6: REDUCE INFLAMMATION

Reducing inflammation helps support recovery and consistency.

STEP 7: SUPPORT RECOVERY

Recovery is where progress happens.

STEP 8: ADD HERBAL SUPPORT

Herbs can complement healthy habits.

STEP 9: CHOOSE YOUR OI WELLNESS PATH

MetaTride Ultra™

TriPhase MetaBurn™

CraveTend™

STEP 10: BUILD LONG-TERM HABITS

Sustainable results require sustainable habits.

WHY DEFICIENCIES MATTER

Think of your body like a business.

Every department has a job.

Energy production.

Recovery.

Digestion.

Hormone communication.

Inflammation management.

Muscle repair.

Nervous system regulation.

When key nutrients are missing, performance suffers.

Many individuals attempt to push harder without realizing their body may be lacking the resources needed to perform efficiently.

Common deficiencies include:

- Vitamin D
- Magnesium
- Iron
- Ferritin
- Zinc
- Vitamin B12
- Omega-3 Fatty Acids
- Potassium
- Protein

Deficiencies may contribute to:

- Fatigue
- Brain fog
- Cravings
- Reduced exercise performance
- Poor recovery
- Difficulty staying consistent
- Slower progress

Correcting deficiencies creates a stronger foundation for every wellness strategy that follows.

FAT LOSS VS WEIGHT LOSS

Many people use these terms interchangeably.

They are not the same thing.

Weight loss includes:

- Water
- Muscle
- Fat
- Glycogen
- Digestive contents

Fat loss focuses specifically on reducing excess body fat.

A person can lose weight while also losing valuable muscle tissue.

This is why body composition matters.

The goal should never be simply becoming lighter.

The goal should be improving body composition.

UNDERSTANDING BODY COMPOSITION

Body composition refers to the ratio of:

- Body fat
- Lean muscle
- Water
- Bone mass

Two people can weigh the same amount while having completely different body compositions.

One individual may carry more muscle.

The other may carry more body fat.

This is why the scale only tells part of the story.

WHY MUSCLE PRESERVATION MATTERS

Muscle is one of the most important tissues in the body.

Muscle supports:

- Strength
- Mobility
- Stability
- Recovery
- Functional movement
- Exercise performance
- Healthy aging

Muscle also requires energy to maintain.

This is one reason preserving muscle is often emphasized during body-composition programs.

Many individuals unknowingly lose muscle while attempting to lose weight.

This can create future challenges.

The goal is not simply to lose pounds.

The goal is to lose excess body fat while preserving as much lean muscle as possible.

HOW TO PRESERVE MUSCLE

PRIORITIZE PROTEIN

Protein provides the amino acids necessary for muscle repair and maintenance.

STRENGTH TRAIN

Resistance training provides the body with a reason to maintain muscle tissue.

STAY HYDRATED

Hydration supports recovery and physical performance.

SLEEP

Recovery occurs during rest.

ADDRESS DEFICIENCIES

The body requires adequate nutrients to support muscle maintenance.

UNDERSTANDING INFLAMMATION

Inflammation is often misunderstood.

Inflammation is part of the body's natural defense and repair system.

Short-term inflammation helps the body respond to stress and injury.

Chronic inflammation is different.

When inflammation remains elevated for long periods of time, individuals may experience:

- Fatigue
- Water retention
- Poor recovery
- Brain fog
- Joint discomfort
- Reduced activity levels

Many people carrying excess body fat may also experience increased inflammatory activity.

SIGNS INFLAMMATION MAY NEED ATTENTION

- Feeling sluggish
 - Fatigue
 - Joint discomfort
 - Water retention
 - Brain fog
 - Difficulty recovering
 - Reduced motivation
-

SUPPORTING A HEALTHY INFLAMMATORY RESPONSE

Improve Sleep

Increase Hydration

Eat More Whole Foods

Increase Protein Intake

Manage Stress

Move Consistently

Address Deficiencies

Prioritize Recovery

RECOVERY IS WHERE PROGRESS HAPPENS

Many people focus on effort.

Very few focus on recovery.

The body repairs itself during recovery.

Without recovery:

- Energy decreases
- Consistency suffers
- Performance declines

Recovery includes:

- Sleep
 - Nutrition
 - Hydration
 - Stress management
 - Mobility work
 - Rest
-

UNDERSTANDING PEPTIDES

Peptides are short chains of amino acids that help cells communicate.

Different peptides have different purposes.

Peptides are tools.

They are not replacements for:

- Protein
- Water
- Sleep
- Exercise
- Nutrition

The strongest results occur when peptides are used alongside healthy habits.

HOW PEPTIDES FIT INTO THE OI SYSTEM

Peptides perform best when the foundation is already strong.

That foundation includes:

- Corrected deficiencies
- Proper hydration
- Protein intake
- Sleep
- Recovery
- Consistency

The stronger the foundation, the better positioned an individual is to maximize long-term success.

METATRIDE ULTRA™

Powered By Tirzepatide

MetaTride Ultra™ was developed for individuals seeking support with appetite awareness, satiety, and nutritional consistency.

Many people struggle with constant hunger.

Others struggle with food noise.

Food noise refers to the constant mental focus on food.

Individuals often describe food noise as:

- Thinking about food throughout the day
- Planning meals constantly
- Craving snacks
- Feeling unsatisfied after eating

MetaTride Ultra™ was designed to support individuals seeking greater control over eating behaviors and nutritional consistency.

Designed To Support

- Appetite awareness
- Satiety
- Portion control

- Meal satisfaction
- Reduced food noise
- Consistency

Muscle Preservation During MetaTride Ultra™

Protein remains important.

Hydration remains important.

Strength training remains important.

Muscle preservation should remain a priority throughout the journey.

TRIPHASE METABURN™

Powered By Retatrutide

TriPhase MetaBurn™ was designed for individuals seeking advanced support for long-term body-composition goals.

Transformation is not only about appetite.

It is also about consistency.

Individuals pursuing long-term wellness goals often focus on:

- Recovery
- Protein intake
- Hydration
- Strength training
- Sustainable habits

Designed To Support

- Appetite regulation
- Nutritional consistency
- Long-term body-composition goals
- Wellness-focused lifestyle changes

Best Paired With

- Protein-focused nutrition
- Strength training
- Recovery habits
- Hydration
- Deficiency correction

WHY CONSISTENCY BEATS PERFECTION

Many people believe success comes from perfection.

Success actually comes from consistency.

Small actions repeated daily often outperform extreme actions performed occasionally.

Consistency builds habits.

Habits create outcomes.

CRAVETEND™

Powered By Cagrilintide

CraveTend™ was developed for individuals seeking support with cravings and meal satisfaction.

Many individuals know what they should eat.

The challenge is remaining consistent.

Cravings can make consistency difficult.

CraveTend™ was designed to support:

- Fullness
- Satiety
- Craving management
- Portion awareness
- Nutritional consistency

Many individuals discover that improving meal satisfaction helps support better food choices over time.

HERBS & WELLNESS SUPPORT

Herbs have been used throughout history to complement wellness practices.

Herbs are not substitutes for healthy habits.

They are tools that can support an overall wellness strategy.

APPETITE SUPPORT HERBS

Gymnema

Traditionally used in wellness routines focused on cravings.

Cinnamon

Commonly incorporated into nutritional support programs.

Fenugreek

Traditionally used in digestive and wellness practices.

DIGESTIVE SUPPORT HERBS

- **Ginger**-Supports digestive comfort.
 - **Peppermint**-Widely used in digestive wellness routines.
 - **Fennel**-Traditionally used to support digestion.
 - **Chamomile**-Often used to support digestive relaxation.
-

RECOVERY SUPPORT HERBS

- **Turmeric**-Frequently used in wellness routines focused on recovery.
 - **Boswellia**-Often used to support mobility and recovery practices.
-

STRESS SUPPORT HERBS

- **Lemon Balm**-Traditionally used for calmness.
 - **Passionflower**-Commonly used in relaxation routines.
 - **Holy Basil**-Traditionally used for stress-support practices.
-

MINERAL SUPPORT HERBS

- **Nettle**-Naturally rich in minerals.
 - **Oatstraw**-Traditionally used for nourishment.
 - **Alfalfa**-Used as a nutrient-dense herb.
-

BUILDING YOUR OI WELLNESS STACK

FOUNDATION

- Blood Type Knowledge
- Lab Testing
- Deficiency Correction
- Hydration
- Protein
- Sleep
- Movement

SUPPORT

- Herbal Support
- Recovery Practices
- Stress Management

OPTIMIZATION

- MetaTride Ultra™
- TriPhase MetaBurn™
- CraveTend™

LONG-TERM MAINTENANCE

The goal is not temporary success.

The goal is sustainability.

Long-term maintenance is built through:

- Consistency
- Hydration
- Protein intake
- Strength training
- Recovery
- Sleep
- Stress management
- Healthy habits

Individuals who maintain healthy habits are often better positioned to maintain long-term results.

Foundational Wellness Herbs & Natural Supports

These are some of the most commonly used natural wellness products that many individuals incorporate into their daily routines.

Sea Moss

Sea Moss is often used as a mineral-rich wellness food.

Common Reasons People Use Sea Moss

- Mineral support
- Daily wellness routines
- Nutritional support
- Hydration support

Often Contains Naturally Occurring Minerals Such As

- Potassium
- Magnesium
- Calcium
- Zinc
- Iron

Pairs Well With

- Deficiency correction
 - Hydration goals
 - Mineral support routines
-

Black Seed Oil

Black Seed Oil has been used traditionally for centuries.

Common Reasons People Use Black Seed Oil

- Daily wellness support
- Digestive support
- Immune wellness routines
- Recovery-focused wellness practices

Often Used As Part Of

- Morning wellness routines
- Herbal support programs
- General wellness plans

Soursop

Soursop has a long history of traditional use.

Common Reasons People Use Soursop

- Wellness support
- Herbal routines
- Antioxidant-rich nutrition plans

Common Forms

- Tea
- Leaf preparations
- Fruit consumption

Often Combined With

- Sea Moss
- Black Seed Oil
- Burdock Root
- Nettle

Oregano

Oregano is one of the most widely used herbs in wellness traditions.

Common Reasons People Use Oregano

- Digestive wellness support
- Seasonal wellness routines
- General herbal support

Common Forms

- Oregano leaf
- Oregano tea
- Oregano oil

Often Used Alongside

- Garlic
- Ginger
- Black Seed Oil
- Turmeric

There is no single product, supplement, herb, peptide, workout, or meal plan that creates transformation.

Success comes from understanding how the body works together with consistency.

When deficiencies are corrected, inflammation is managed, muscle is preserved, recovery is prioritized, and healthy habits are maintained, individuals create a stronger foundation for long-term success.

The strongest transformations are not built in weeks.

They are built through habits that can be maintained for years.
